

## GENERAL DESCRIPTION

- Revo $S$ has been specifically designed to save space and labour
- These simple units can be connected with REVO PC to manage multizone system this minimize your energy cost by controlling synchronization and power limit on each zone
- All circuit board, Fuses and Thristor can be inspected just opening the front door
- Input signal: SSR, Analog as an option
- Zero Crossing, Burst Firing available at 4, 8 or 16 Cycles at 50\% of Power demand
- Electronic fully isolated from power with constant current drain on input.
- Heater Break alarm option to diagnose partial or total load failure and Thyristor Short circuit
- Fixed Fuse are available as a standard
- Current transformer integrated (with Heather Break option)
- Special design for Heat sink with very high dissipation value
- Comply with EMC, cUL (pending)
- DIN RAIL side by side mounting
- IP20 Protection

## TECHNICAL SPECIFICATION

| Voltage power supply | 24 V minimum up to $480 \mathrm{~V}, 600 \mathrm{~V}$ On request |  |  |
| :---: | :---: | :---: | :---: |
| Voltage Frequency | 50 or 60 Hz no setting needed from 47 to 70 Hz |  |  |
| Nominal Current | 60A, 90A, 120A, 150A, 180A, 210A |  |  |
| Input Signal | SSR for REvo S, No Fuse, <br> SSR for REvo S, Fuse + Fuse Holder <br> SSR for REVO S, Fuse + Fuse Holder, HB <br> Voltage input <br> Current input | 5:30Vdc <br> 7:30Vdc <br> 4:30Vdc <br> $0: 10 \mathrm{Vdc}$ <br> 0:20/4:20mA | 18 mA Max ( $\mathrm{O} \mathrm{n} \geq 5 \mathrm{Vdc}$ off $\leq 4 \mathrm{Vdc}$ ); 18 mA Max ( $0 \mathrm{n} \geq 7 \mathrm{Vdc}$ Off $\leq 6 \mathrm{Vdc}$ ); 6 mA Max ( $\mathrm{On} \geq 4 \mathrm{Vdc}$ Off $\leq 1 \mathrm{Vdc}$ ); impedance 15 K ohm; impedance 100 Ohm; |
| Firing | Zero Crossing, Burst Firing with analog input signal only |  |  |
| Auxiliary Voltage Supply | 12:24V dc/ac (max 70 mA ) required only with HB Alarm or Analog Input Option |  |  |
| Heater Break Alarm | Microprocessor based with automatic setting via Digital Input; Relay Output 0,5A at 110 V |  |  |
| Mounting | Panel mounting |  |  |
| Operating Temperature | $40^{\circ} \mathrm{C}$ without derating. Over this temperature see below derating curve |  |  |
| Storage temperature | $-25^{\circ} \mathrm{C}$ to $70{ }^{\circ} \mathrm{C}$ Max |  |  |
| Altitude | Over 1000 m of altitude reduce the nominal current of 2\% for each 100 m |  |  |
| Humidity | From 5 to 95\% without condense and ice |  |  |

## HEATER BREAK ALARM (HB)

ON FRONT CABINET

FEW SECOND TO SET AND CALIBRATE ALL THE UNITS

- Microprocessor based circuit
- Capacity to diagnose the failure of one Resistance over five in parallel
- Load failure alarm with LED indication on front unit
- Thyristor short circuit alarm with LED indication on front unit
- Alarm output with free voltage relay contact
- Alarm reset function and possibility to auto reset if the alarm disappear
- Built in Current transformer when heater Break option has been selected
- Self Setting via external command or push button on front unit
- Commom setting command can be given to many units and in a matter of second, the tuning is done, also by a non expert operator

## HOW TO ADD POWER LOAD MANAGMENT AND FEATURES TO YOUR SIMPLE UNITS

APPLICATION WITH 8,
THREE PHASE LOADS

WITHOUT POWER CONTROL OPTIMISATION

WITH POWER CONTROL OPTIMISATION

Use REVO-PC and you can add these Features

- Communication with different field bus
- Reading of current Voltage and Power
- Istantaneus power very close to average value, no pick power
- Power factor close to one no harmonics
- Prevents increase in energy supply tariffs imposed by your electricity supplier

## Synchronization

On all controlled zones, REVO-PC Synchronization is automatic resulting in superior performance:

- Total current is equal to a sinusoidal wave form.
- Power factor > 0,9.
- Instantaneous current close to average value.
- Cancellation of harmonics.
- Flickering effect removed.

## Smart power limitation

- Smart power limitation works together with synchronization. If this function is enabled, REVO-PC makes a live calculation of power at each period and generates the output values for the next period. If the calculated power is below the power limit value, the previous values remain with each channel using full power.
- If the power is above the power limit value, the setpoint of each channel is reduced proportionally to restrict power overshoot. This function significantly reduces disturbances on the main network compared to a full power system, preventing any increase in energy tariffs imposed by the electricity supplier.
- This function can be activated/deactivated and the limit value changed at any time.
